A little about me...

- Koç University
  Associate Professor
  2020-now

- Hacettepe University
  Associate Professor
  2010-2020

- Università Ca' Foscari di Venezia
  Post-doctoral Researcher
  2008-2010

- Middle East Technical University
  1997-2008
  Ph.D., 2008
  M.Sc., 2003
  B.Sc., 2001

- MIT
  Fall 2007
  Visiting Student

- VirginiaTech
  Visiting Research Scholar
  Summer 2006

- I explore better ways to understand, interpret and manipulate visual data.

- My research interests span a diverse set of topics, ranging from image editing to visual saliency estimation, and to multimodal learning for integrated vision and language.

https://aykuterdem.github.io
Plan For Today

• Course Introduction
• COMP201 Course Policies
• Unix and the Command Line
• Getting Started With C

Disclaimer: Slides for this lecture were borrowed from
—Nick Troccoli's Stanford CS107 class
COMP201 on Zoom

• You are encouraged to turn on your cameras in order to keep human touch with others and not to feel alone, but this is clearly not a must!

• I will upload the slides prior to the class so that you can take a look/study the lecture material before the class. We’ll take regular question breaks to address your questions.

• In Zoom, everyone is muted by default. However, during the question breaks, you can unmute yourself or alternatively use Zoom chat to ask your questions.
Lecture Plan

• Course Introduction
• COMP201 Course Policies
• Unix and the Command Line
• Getting Started With C
What is COMP201?

• **A new addition to the COMP curriculum**, designed from ground-up.

• The third course in the line of COMP’s introductory programming courses (COMP100, COMP132, and COMP201)
  • COMP100 teaches you the notion of computational thinking and how to solve problems as a programmer (using Python)
  • COMP132 introduces you object-oriented programming paradigm (using Java)

• **COMP201 takes you behind the scenes:**
  • Not quite down to hardware or physics/electromagnetism (that’s for later…)
  • It’s how things work **inside C++/Python/Java**, and how your programs map onto the components of computer systems
  • Not only does it just feel good to know how these work, it can also inform projects you work on in the future.
Role within COMP Curriculum

- COMP301 Programming Language Concepts
- COMP304 Operating Systems
- COMP306 Database Management Systems
- COMP416 Computer Networks
- COMP317 Embedded Systems
- COMP303 Computer Architecture

COMP201 Computer Systems and Programming

- Programming Languages
- Processes, Memory Management
- Data Reps., Memory Mode
- Network Protocols
- Execution Model Memory System

COMP100 Intro. to CS & Programming
COMP132 Advanced Programming
What is COMP201?

Computer Systems and Programming

- How languages like C++ and Java represent data under the hood
- How programming structures are encoded in bits and bytes
- How to efficiently manipulate and manage memory
- How computers compile programs
- How cache memories work and how to exploit them to improve the performance of your programs
- Uses the C programming language
- Programming style and software development practices
COMP201 Learning Goals

The goals for COMP201 are for students to gain **mastery** of
- writing C programs with complex use of memory and pointers
- an accurate model of the address space and compile/runtime behavior of C programs

to achieve **competence** in
- translating C to/from assembly
- writing programs that respect the limitations of computer arithmetic
- finding bottlenecks and improving runtime performance
- working effectively in a Unix development environment

and have **exposure** to
- a working understanding of the basics of cache memories
COMP201 Learning Goals

(also learn to identify legitimate programmer scenes in old movies)

Jeff Goldblum’s character saving the world by uploading a virus to the alien mothership. *Independence Day*, 1996.

Course Overview

1. Bits and Bytes - How can a computer represent integer numbers?
2. Chars and C-Strings - How can a computer represent and manipulate more complex data like text?
3. Pointers, Stack and Heap – How can we effectively manage all types of memory in our programs?
4. Generics - How can we use our knowledge of memory and data representation to write code that works with any data type?
5. Assembly - How does a computer interpret and execute C programs?
6. The Memory Hierarchy - How does the memory system is organized as a hierarchy of different storage devices with unique capacities
7. The Heap Allocators - How do core memory-allocation operations like malloc and free work?
COMP201 - The Online Edition

• This quarter, we will try our best to make your COMP201 experience as close as the face-to-face teaching version.

• **We are working to emphasize community and connection.**

• We understand that the pandemic poses unique challenges for each and every one of us involved.

• We will constantly evaluate and listen to ensure the class is going as smoothly as possible for everyone.

• Please don’t hesitate to reach out if you want our support. We are always here for you.
COMP201 Slack Workspace

https://join.slack.com/t/comp201/signup
Slack Developer Community Code of Conduct

This code of conduct governs Slack Platform's Community events and discussions.

**Introduction**

- Diversity and inclusion make our community strong. We encourage participation from the most varied and diverse backgrounds possible and want to be very clear about where we stand.
- Our goal is to maintain a safe, helpful and friendly community for everyone, regardless of experience, gender identity and expression, sexual orientation, disability, personal appearance, body size, race, ethnicity, age, religion, nationality, or other defining characteristic.
- This code and related procedures apply to unacceptable behavior occurring in all community venues, including behavior outside the scope of community activities — online and in-person — as well as in all one-on-one communications, and anywhere such behavior has the potential to adversely affect the safety and well-being of community members.

**Expected Behavior**

- Be welcoming.
- Be kind.
- Look out for each other.

**Unacceptable Behavior**

- Conduct or speech which might be considered sexist, racist, homophobic, transphobic, ableist or otherwise discriminatory or offensive in nature.
  - Do not use unwelcome, suggestive, derogatory or inappropriate nicknames or terms.
  - Do not show disrespect towards others (jokes, innuendo, dismissive attitudes).
- Intimidation or harassment (online or in-person). Please read the Citizen Code of Conduct for how we interpret harassment.
- Disrespect towards differences of opinion.
- Inappropriate attention or contact. Be aware of how your actions affect others. If it feels uncomfortable, it is.

*lecture videos on Panopto – can be accesses through Blackboard or from the course webpage
Question Break!
Lecture Plan

• Introduction
• COMP201 Course Policies
• Unix and the Command Line
• Getting Started With C
Textbooks

• **Computer Systems: A Programmer’s Perspective** by Bryant & O’Hallaron, 3rd Edition
  • 3rd edition matters – important updates to course materials
• A C programming reference of your choice
  • *The C Programming Language* by Kernighan and Ritchie
  • Other C programming books, websites, or reference sheets
Course Structure

• **Lectures**: understand concepts, see demos
• **Labs**: learn tools, study code, discuss with peers
• **Assignments**: build programming skills, synthesize lecture/lab content

<table>
<thead>
<tr>
<th></th>
<th>Monday</th>
<th>Wednesday</th>
<th>Friday</th>

</tbody>
</table>

• **assg0**: out later on Wednesday, due Feb 24
• **C bootcamp**: this week (during lab hours)
Grading

38%  Programming assignments
21%  Labs
20%  Midterm exam
21%  Final exam
Grading

38%  Programming assignments
21%  Labs
20%  Midterm exam
21%  Final exam
Assignments

• 7 programming assignments completed individually using Unix command line tools
  • Free software, pre-installed on linuxpool cluster dedicated to COMP students
  • GitHub Classroom + Repl.it
  • We will give out starter projects for each assignment

• Graded on functionality (behavior) and style (elegance)
  • Functionality graded using automated tools, given as point score
  • Style graded via automated tests and TA code review,
  • Grades returned via Blackboard
Late Policy

• **Start out with 7 grace days**: each late day allows you to submit an assignment without penalty if you have free grace days left.

• **Hard deadline**: No submissions will be accepted **48 hours** after the original due date

• Penalty per day after grace days are exhausted
  – 1 day: 20% off
  – 2 days: 40% off
Question Break!

Midterm and Final Exams

• Online exams through Blackboard
  • Midterm: At week 9, date and time will be announced later
  • Final: Date and time will be announced later

• The exams will include multiple-choice questions as well as open-ended fill-in-the-blanks or short answer type questions.

• The exams will be released in multiple sessions, in which each student is required to complete each session in a limited time.
Question Break!
Grading

38%  Programming assignments
21%  Labs
20%  Midterm exam
21%  Final exam

NOTE: Once the final letter grades are determined, a student can choose to be graded with “S” grade if the final grade is "D" or above.
Question Break!
Getting Help

• Post on the **Discussion Forum**
  – Online discussion forum for students; post questions, answer other students’ questions
  – Best for course material discussions, course policy questions or general assignment questions (DON’T POST ASSIGNMENT CODE!)

• Visit **Online Office Hours**
  – More info to come soon!

• **Email** the Course Staff
  – Best for *private matters* (e.g. grading questions).
Koç University Honor Code

• For assignments/quizzes/exams students should be required to digitally add and approve a version of the agreement below.

I hereby declare that I have completed this examination individually, without support from anyone else.

I hereby accept that only the below listed sources are approved to be used during this open-source examination:

(i) Coursebook,

(ii) All material that is made available to students via Blackboard for this course, and

(iii) Notes taken by me during lectures.

I have not used, accessed or taken any unpermitted information from any other source. Hence, all effort belongs to me.
Honor Code and COMP201

• Please help us ensure academic integrity:
  • Indicate any assistance received on HW (books, friends, etc.).
  • Do not look at other people's solution code or answers.
  • Do not give your solutions to others or post them on the web or to the forum.
  • Report any inappropriate activity you see performed by others.

• Assignments are checked regularly for similarity with help of automated software tools.

• If you realize that you have made a mistake, you may retract your submission to any assignment at any time, no questions asked. Come to use before we come for you.

• If you need help, please contact us and we will help you.
  • We do not want you to feel any pressure to violate the Honor Code in order to succeed in this course.
Question Break!
Poll Time
What is your favorite program?
Lecture Plan

• Introduction
• COMP201 Course Policies
• Unix and the Command Line
• Getting Started With C
What is Unix?

- **Unix:** a set of standards and tools commonly used in software development.
  - `macOS` and `Linux` are operating systems built on top of Unix
- You can navigate a Unix system using the **command line** ("terminal")
- Every Unix system works with the same tools and commands
What is the Command Line?

• The **command-line** is a text-based interface (i.e., **terminal** interface) to navigate a computer, instead of a Graphical User Interface (GUI).
Command Line vs. GUI

Just like a GUI file explorer interface, a terminal interface:

- shows you a **specific place** on your computer at any given time.
- lets you go **into folders** and **out of folders**.
- lets you **create new** files and **edit** files.
- lets you **execute programs**.
Why Use Unix / the Command Line?

• You can navigate almost any device using the same tools and commands:
  • Servers
  • Laptops and desktops
  • Embedded devices (Raspberry Pi, etc.)
  • Mobile Devices (Android, etc.)

• Used frequently by software engineers:
  • Web development: running servers and web tools on servers
  • Machine learning: processing data on servers, running algorithms
  • Systems: writing operating systems, networking code and embedded software
  • Mobile Development: running tools, managing libraries
  • And more...

• We’ll use Unix and the command line to implement and execute our programs.
Demo: Using Unix and the Command Line
Unix Commands Recap

- **cd** – change directories (..)
- **ls** – list directory contents
- **mkdir** – make directory
- **emacs** – open text editor
- **vi** – open text editor
- **rm** – remove file or folder
- **man** – view manual pages

See the Resources page of the course website for more commands, and a complete reference.

Lab 1: The Linux Shell *(next week)*
Learning Unix and the Command Line

• Using Unix and the command line can be intimidating at first:
  • It looks retro!
  • How do I know what to type?

• It’s like learning a new language:
  • At first, you may have to constantly look things up (Resources page on course website!)
  • It’s important to spend as much time as possible (during labs and assignments) building muscle memory with the tools
Question Break!
Additional Reading

Lecture Plan

• Introduction
• COMP201 Course Policies
• Unix and the Command Line
• Getting Started With C
The C Language

C was created around 1970 to make writing Unix and Unix tools easier.

• Part of the C/C++/Java family of languages (C++ and Java were created later)

• Design principles:
  • Small, simple abstractions of hardware
  • Minimalist aesthetic
  • Prioritizes efficiency and minimalism over safety and high-level abstractions
C vs. C++ and Java

They all share:
• Syntax
• Basic data types
• Arithmetic, relational, and logical operators

C doesn’t have:
• More advanced features like operator overloading, default arguments, pass by reference, classes and objects, ADTs, etc.
• Extensive libraries (no graphics, networking, etc.) – this means not much to learn C!
• many compiler and runtime checks (this may cause security vulnerabilities!)
Programming Language Philosophies

• **C is procedural:** you write functions, rather than define new variable types with classes and call methods on objects. C is small, fast and efficient.

• **C++ is procedural, with objects:** you write functions, and define new variable types with classes, and call methods on objects.

• **Python is also procedural, but dynamically typed:** you still write functions and call methods on objects, but the development process is very different.

• **Java is object-oriented:** virtually everything is an object, and everything you write needs to conform to the object-oriented design pattern.
Why C?

- Many tools (and even other languages, like Python!) are built with C.
- C is the language of choice for fast, highly efficient programs.
- C is popular for systems programming (operating systems, networking, etc.)
- C lets you work at a lower level to manipulate and understand the underlying system.
Programming Language Popularity

TIOBE Programming Community Index
Source: www.tiobe.com

https://www.tiobe.com/tiobe-index/
Our First C Program

/*
 * hello.c
 * This program prints a welcome message
 * to the user.
 */
#include <stdio.h>  // for printf

int main(int argc, char *argv[]) {
   printf("Hello, world!\n");
   return 0;
}
Our First C Program

/*
 * hello.c
 * This program prints a welcome message
 * to the user.
 */

#include <stdio.h> // for printf

int main(int argc, char *argv[]) {
    printf("Hello, world!\n");
    return 0;
}
Our First C Program

/*
 * hello.c
 * This program prints a welcome message
 * to the user.
 */
#include <stdio.h> // for printf

int main(int argc, char *argv[]) {
    printf("Hello, world!\n");
    return 0;
}
Our First C Program

/*
 * hello.c
 * This program prints a welcome message
 * to the user.
 */
#include <stdio.h>  // for printf

int main(int argc, char *argv[]) {
    printf("Hello, world!\n");
    return 0;
}

**main function** – entry point for the program
Should always return an integer (0 = success)
Our First C Program

/*
 * hello.c
 * This program prints a welcome message
 * to the user.
 */
#include <stdio.h> // for printf

int main(int argc, char *argv[]) {
    printf("Hello, world!\n");
    return 0;
}
Our First C Program

/*
 * hello.c
 * This program prints a welcome message
 * to the user.
 */
#include <stdio.h>  // for printf

int main(int argc, char *argv[]) {
  printf("Hello, world!\n");
  return 0;
}

printf – prints output to the screen
Familiar Syntax

```c
int x = 42 + 7 * -5; // variables, types
double pi = 3.14159;
char c = 'Q'; /* two comment styles */

for (int i = 0; i < 10; i++) {
    if (i % 2 == 0) {
        x += i;
    }
}

while (x > 0 && c == 'Q' || b) {
    x = x / 2;
    if (x == 42) { return 0; }
}

binky(x, 17, c); // function call
```
Boolean Variables

To declare Booleans, (e.g. `bool b = _____`), you must include `stdbool.h`:

```c
#include <stdio.h>    // for printf
#include <stdbool.h>  // for bool

int main(int argc, char *argv[]) {
    bool x = 5 > 2 && binky(argc) > 0;
    if (x) {
        printf("Hello, world!\n");
    } else {
        printf("Howdy, world!\n");
    }
    return 0;
}
```
Boolean Expressions

C treats a nonzero value as true, and a zero value as false:

```c
#include <stdio.h>

int main(int argc, char *argv[]) {
    int x = 5;
    if (x) {   // true
        printf("Hello, world!\n");
    } else {
        printf("Howdy, world!\n");
    }
    return 0;
}
```
Console Output: printf

printf(text, arg1, arg2, arg3);

// Example
char *classPrefix = "COMP";
int classNumber = 201;
printf("You are in %s%d", classPrefix, classNumber); // You are in COMP201

printf makes it easy to print out the values of variables or expressions. If you include placeholders in your printed text, printf will replace each placeholder in order with the values of the parameters passed after the text.

%s (string)    %d (integer)    %f (double)
Question Break!
Writing, Debugging and Compiling

We will use:

• the **vi/emacs** text editor to write our C programs
• the **make** tool to compile our C programs
• the **gdb** debugger to debug our programs
• the **valgrind** tools to debug memory errors and measure program efficiency
Demo: Compiling And Running a C Program

args.c
Working On C Programs Recap

- **ssh** – remotely log in to *linuxpool* computers (*later*)
- **Vi/Emacs** – text editor to write and edit C programs
  - Use the mouse to position cursor, scroll, and highlight text
  - `:w` / `Ctl-x Ctrl-s` to save, `:q` / `Ctl-x Ctrl-c` to quit
- **make** – compile program using provided Makefile
- **./myprogram** – run executable program (optionally with arguments)
- **make clean** – remove executables and other compiler files
- Lecture codes are accessible at Blackboard
Recap

• COMP201 is a programming class, which uses C to teach you about what goes on under the hood of programming languages and software.

• We’ll use Unix and command line tools to write, debug and run our programs.

• Please regularly visit the course website, https://aykuterdem.github.io/classes/comp201 and follow the announcements on Blackboard.

• We’re looking forward to an exciting quarter!

• Next time: How a computer represents integer numbers? What are the limitations?
